Art Unit: 1756

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-7 and 13-17, drawn to a toner or a developer, and to an apparatus, classified, respectively, in class 430, subclass 108.7, and in class 399, subclass 258.

II. Claims 8-12, drawn to a method for developing an electrostatic latent image, classified in class 430, subclass 120.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions Ia (toner and developer) and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in another and materially different process, such as cascade developing an electrostatic latent image on a sheet to form a toner image with the product of Group I. In cascade developing, the electrostatic latent

Art Unit: 1756

image is developed by flowing or cascading the toner or the developer over the electrostatic latent image. Such a process does not require a developer sleeve as required in the process of Group II.

Inventions II and Ib (apparatus) are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practiced by hand, such as replenishing the toner in a container by manually adding toner to the container; mixing a carrier with the toner in the container by manually adding the carrier to the container and manually turning a two-axis screw mixer to form a developer; manually pouring the developer onto a developer roller while manually passing a blade over the roller to regulate flow the developer; manually positioning the developer roller over the electrostatic latent image; and manually rotating the roller over the latent image to develop the latent image.

Because these inventions are distinct for the reasons given above and have acquired a separate status because of their recognized divergent subject matter, and as shown by their

different classification, restriction for examination purposes as indicated is proper.

3. Applicants are advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Janis L. Dote whose telephone number is (571) 272-1382. The examiner can normally be reached Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Mark Huff, can be reached on (571) 272-1385. The central fax phone number is (703) 872-9306.
